

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

MUMMINA DILEEP KUMAR

About the Company:

SmartBridge is a technology-driven training and innovation partner focused on empowering students and early professionals with real-world experience in emerging technologies. As part of its Salesforce Internship Program, SmartBridge collaborates with academic institutions and industry experts to deliver hands-on learning in Salesforce CRM, automation, and application development.

The organization offers structured learning paths through Salesforce Trailhead, project-based training, and mentor-guided implementation experiences. Interns gain exposure to key Salesforce features such as data modeling, Flows, Apex, SOQL, Lightning Web Components (LWC), and more. SmartBridge's internship programs are designed to simulate real-world business challenges, helping participants build solutions for use cases across industries like retail, automotive, and e-commerce.

Through its Salesforce initiative, SmartBridge aims to bridge the gap between academic learning and industry readiness, preparing students for roles like Salesforce Developer, Administrator, or Consultant. It is recognized for its commitment to skill development, innovation, and digital transformation training.

Summer Internship: Progress Update

Project Scoping & UI Development:

Defined project scope and developed a customized Lightning UI to streamline user workflows and improve navigation

Backend Integration:

Implemented backend logic using Apex triggers, flows, and scheduled jobs for seamless process automation.

Business Process Automation:

Details how processes like order confirmation, stock alerts, and loyalty updates were automated.

Security & Access Control:

Covers role hierarchy, profile permissions, field-level security, etc.

The Problem Statement:

1

Order Processing:

- Manual handling of orders causes delays and errors.
- Lack of automated confirmations and tracking reduces customer satisfaction.

2

Loyalty Tracking:

- No centralized system to manage loyalty points and rewards.
- Customers often miss updates on their loyalty status, leading to disengagement.

3

Inventory Management:

- Difficulty in monitoring stock levels in real-time.
- No automated alerts for low stock, causing delays in restocking and missed sales opportunities.

Results & Discussion Insights

Automated Order Management:

Orders placed via the platform are now automatically captured and tracked in real-time, reducing manual entry by **90%**.

Improved Customer Engagement:

Through the use of **Email Alerts** and **Record-Triggered Flows**, customers receive instant order confirmations and shipping updates, increasing transparency.

Scalability:

The architecture supports scalable order processing with minimal customization, making it ready for business growth.

Streamlined Inventory Updates:

Inventory levels update dynamically based on order quantity, minimizing stock mismatches. The system now flags **Low Stock** status when quantities fall below thresholds.

Data Visibility:

Stakeholders now have access to dashboards showing daily sales, top-selling products, and pending shipments, helping in better decision-making.

Next Steps & Future Enhancements

Building on the success of the initial implementation, our focus shifts to expanding capabilities and ensuring long-term value for HandsMen Threads. We outline key phases for continued development and optimization:

01

User Acceptance Testing (UAT)

Conduct thorough UAT with end-users to gather feedback, validate functionalities, and ensure the solution aligns perfectly with operational needs.

03

Performance Monitoring & Optimization

Establish a continuous monitoring framework to track system performance, identify areas for improvement, and implement optimizations based on real-world usage data and feedback.

02

Deployment & Training Rollout

Execute the full deployment of the Salesforce solution, accompanied by comprehensive training sessions for all relevant staff to ensure smooth adoption and maximum utilization.

04

Advanced Feature Development

Explore and develop new features such as advanced analytics dashboards for deeper insights, mobile application integration for on-the-go access, and potential e-commerce platform connectors.

THANK YOU
